Allowable Subject Matter

1. Claims 27-29 are allowed.
2. The following is an examiner's statement of reasons for allowance:
3. The prior arts of record do not anticipate or render obvious to one skilled in the art a method for fabricating a reflective type reflector plate of a reflective liquid crystal display, the method comprising several steps as claimed, more specifically, the steps such as forming transparent electrodes over the substrate after the thin film transistors are built on the substrate; depositing a protection layer over the transparent electrode wherein the protection layer shields undesired reflection light during an exposure stage and reduces the exposure time; patterning the transparent electrodes and the protection layer to form pixel patterns; spin coating a photoresist layer over the protection layer using polymer resin material; removing the photoresist layer over non-patterned areas and depositing a reflective metal film over the photoresist layer retained on the glass substrate, are considered novel.

The closest reference US 2003/0058388 discloses a reflective type reflector plate of a reflective liquid crystal display, the plate includes a glass substrate (SUB1) on which thin film transistors (not shown), transparent electrodes (PX1) and undulating resin outgrowth (INTL) are formed, wherein a protection layer (PSV1) is formed between the transparent electrodes and the undulating resin outgrowth. However, the above reference alone or in combination fail to teach or suggest the claimed method for fabricating a reflective type reflector plate of a reflective liquid crystal display.
